

NEW!

EMUGE

**HIGH PERFORMANCE SOLID CARBIDE
EF-MICRO DRILLS**

INTRODUCING

EMUGE Solid Carbide Coolant-fed Micro Drills.

For Precision + Performance

Emuge has expanded its EF-Series of high penetration rate drills with a new line of sub-micro grain carbide coolant-fed micro drills.

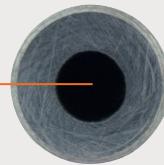

Emuge EF Series Drills are the result of extensive research and development and incorporate special geometry, proprietary carbide grades and a PVD coating design that is unique to the industry. The result is three to five times faster penetration rate than conventional carbide and cobalt drills, in addition to exceptional, high quality threads and longer tool life.

EF High Performance Micro Drills range from 0.0295 in. (0.75 mm) up to 0.1181 in. (3.0 mm) in diameter, and all feature coolant through design. The micro face point and flute geometry, in addition to the coolant-fed design, enable excellent chip evacuation for the highest possible drilling speed, while reducing the need for peck cycles or clearing chips.

New Emuge EF-Micro Drills feature:

- **Unique face geometry** generates short chips in the drill operation, ensuring high drill hole accuracy.
- **TiALN T99 multi-layer PVD coating** designed for added heat and wear resistance. This significantly reduces built-up edges and edge chipping, substantially increasing tool life.
- **Double margin design** for added stability and superior hole surface finish.
- **All tools are $6 \times D$ length** and can accommodate most production applications.

Large central tool shank channel guarantees maximum coolant intake capacity, allowing optimal coolant transfer.

Internal coolant supply enables economically efficient, high performance machining down to even the smallest drilling diameter of 0.75 mm.

*German engineered
Emuge quality*

EF Solid Carbide Coolant-Fed Micro Drills are ideal for aerospace, medical and precision automotive applications, designed for producing very small deep holes in steel, alloyed steel, titanium, stainless steel and non-ferrous materials.

Applications / Materials

Please note:

Drill suitability is identified in the respective columns as follows:

- = very suitable
- = suitable

See page 5 for appropriate cutting speeds
 V_c [m/min] and feed per revolution values
 f [mm/rev.]

Coolant Information:

Coolant filtration is important with micro drills. A general recommendation for filtering is:

- Filter quality of 10 microns for diameters under 1 mm
- Filter quality of 20 microns for diameters between 1 mm and 3 mm

Coolant pressure:

High pressure coolant is recommended with micro drills. Peck cycles might be needed if coolant pressure is under 500psi. You should not need peck cycles if the psi is over 500psi.

Coolant-lubricant recommendation

1.4		60 - 63							
1.5		63 - 66							

Cutting data

Please note that these data are standard values only.

- We recommend the standard values in bold print (rec.) for stable work conditions and for high-performance machine tools with sufficient speed capability.
- Correspondingly, the lower cutting speeds (min.) in connection with higher feed values (up to max.) should be used for machine tools with lower spindle speeds.
- For optimum workpiece conditions, and for machine tools with extremely high performance and high spindle speeds, the high cutting speeds (max.) in connection with possibly reduced feed values can be applied.

			D = 0.8 mm			D = 1.0 mm			D = 1.25 mm			D = 1.5 mm			D = 2.0 mm			D = 2.5 mm			D = 3.0 mm

Emuge High Precision / Performance FPC Milling / Drilling Chucks

Emuge FPC Chucks provide unprecedented rigidity, vibration dampening, concentricity, machining speed and tool life vs. conventional chuck technologies for milling and drilling applications. Available in a wide range of styles, internal and peripheral coolant collet options, and MQL-adaptable.

FPC chucks available in CAT, SK, BT, CAPTO and HSK styles.

FMC collet extensions
also available.

Carbide micro drills
can be successfully
run in sealed
precision collets.

EMUGE HIGH PERFORMANCE TOOLS

**Ask about our convenient
NEW EF-C Drill-Chamfer
Tool Program.**

*Combination carbide drill-countersink
tools, many sizes available from
stock or order customized lengths
in less than 4 weeks!*

**Exclusive to Emuge.
